

Suspended heat recovery air handling units

KOMFORT Roto EC S KOMFORT Roto EC SE

Air capacity – up to 670 m³/h.

Heat recovery efficiency – up to 85 %

Description

Air handling units KOMFORT Roto EC S(E) are the ready-to-use ventilation units that provide air filtering, supply of fresh air to the premises and removal of stale air. Heat recovery from the exhaust air to the supply air is provided by the rotary heat exchanger. The units are used in ventilation systems installed in various premises that require reasonable energy saving solutions and controllable ventilation systems. The use of EC-motors allows to reduce the electricity consumption in 1,5-3 times while providing the high capacity and low noise level. All models are designed for connection to ø125, 160 and 200 mm round air ducts.

Modifications

KOMFORT Roto EC S – model without electric heater.
KOMFORT Roto EC SE – model with electric heater.

Casing

The fan casing is made of galvanized steel soundproofed on the inside with mineral wool. The insulation of KOMFORT Roto EC SE200 is 20 mm, for KOMFORT Roto EC SE400 and 600 - 40 mm.

Kitchen hood

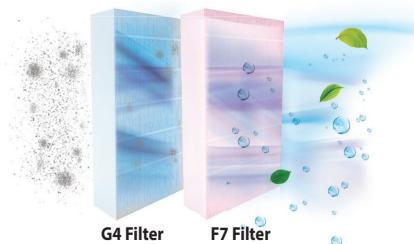

All units are equipped with a 5 m spigot for kitchen hood air duct connection (see "Application example").

The distinctive feature of KOMFORT Roto EC S(E) is the possibility to connect the kitchen hood DAH 251-13 (ordered separately) directly to the unit.

Filter

The two built-in filters G4 and F7 are used for intake air filtration. The built-in filter G4 is used for extract air filtration.

Motor

The unit is equipped with high-efficient EC-motors with an external rotor and a centrifugal impeller. These motors currently are the most cutting-edge solution in the field of energy conservation. The EC-motors are featured with high performance and totally controllable speed range. The high efficiency (up to 90%) is a definite advantage of the EC-motors.

Heater

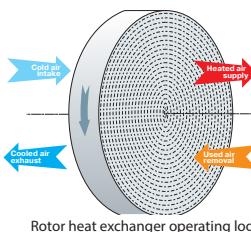

The KOMFORT Roto EC SE units are equipped with the electric heater. If the necessary temperature level of the supply air cannot be achieved through heat recovery, the heater turns on automatically and heats the air supplied to the premise. The heaters incorporate protective measures securing the safe unit operation.

Designation key

Series	Heat exchanger type	Motor type	Mounting type	Heater type	Rated air capacity [m ³ /h]	Control panel
KOMFORT	R - rotary	EC – synchronous electronically commutated motor	S - vertical	- without heater E - electric heater	200; 400; 600	S17 - thTune S18 - pGD1

Rotary heat exchanger

The rotary heat exchanger is a short rotating cylinder filled with aluminium band layered in such a way that both supply and exhaust air flows pass through it. The band the heat exchanger is made of first contacts the supply air flow and then the exhaust air flow. As a result it is heated and cooled in turns transferring heat and moisture from the warm air flow to the cold one. The advantages of the rotary heat exchanger compared to plate heat exchangers are the absence of condensate, comfortable humidity level maintenance and low freezing danger.

Automatics

The KOMFORT Roto EC S(E) S17 units are equipped with the thTune control panel with an LCD display.

The KOMFORT Roto EC S(E) S18 units are equipped with the pGD1 control panel with an LCD display.

The thTune and pGD1 panels are interchangeable.
The standard delivery set includes a 10 m cable for connection to the control panel.

Automatics functions

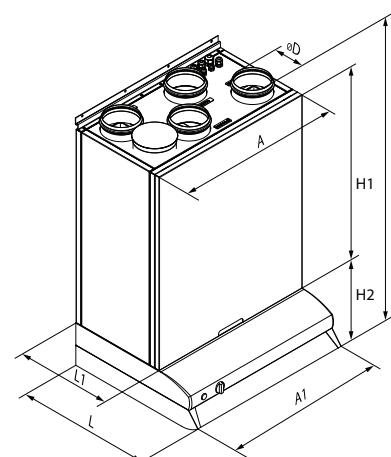

- Turning the unit on/off.
- Turning on the operation modes: Automatic mode, Ventilation mode (can be enabled only from the pGD1 control panel).
- Maintaining a pre-set room temperature by activating/deactivating the rotary heat exchanger.
- Automatic reduction of the supply and exhaust ventilation air flow rate to obtain the user-defined minimum allowable supply air temperature.
- Supply and exhaust fan control.
- Unit operation according to a pre-programmed schedule.
- Controlling the electric actuators of the supply and exhaust air dampers.
- System shutdown on signal from fire fighting system.
- When connecting external electrical heating elements and/or CCU to the unit the activation signal controls their operation if cooling/heating is required.
- Filter contamination control by the number of operating hours.

Mounting

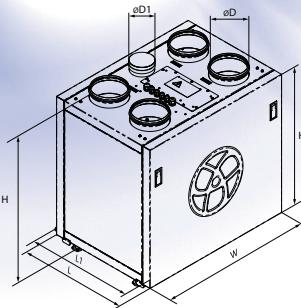

The air handling unit is designed for wall and floor mounting.
The access for unit maintenance and filter replacement is available from the front panel.

The front and the rear panels can switch places. This allows left or right-handed use of the unit.

*Heat recovery efficiency is specified in compliance with EN 13141-7.

Calculation of air temperature downstream of the heat exchanger:

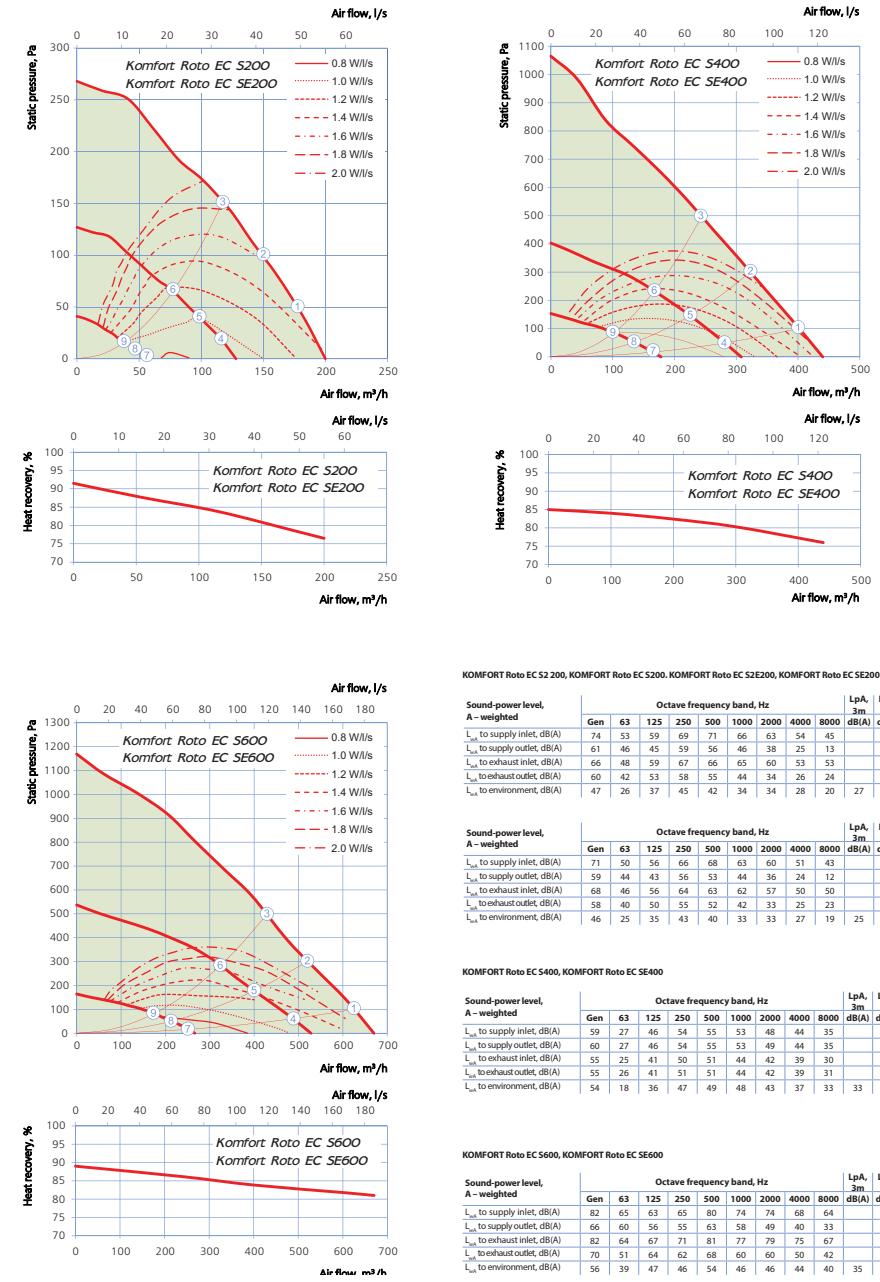

$$t_{\text{out}} + k_{\text{he}} * (t_{\text{exh}} - t_{\text{out}}) / 100,$$

where

t_{out} – outdoor air temperature °C,

t_{exh} – exhaust air temperature °C,

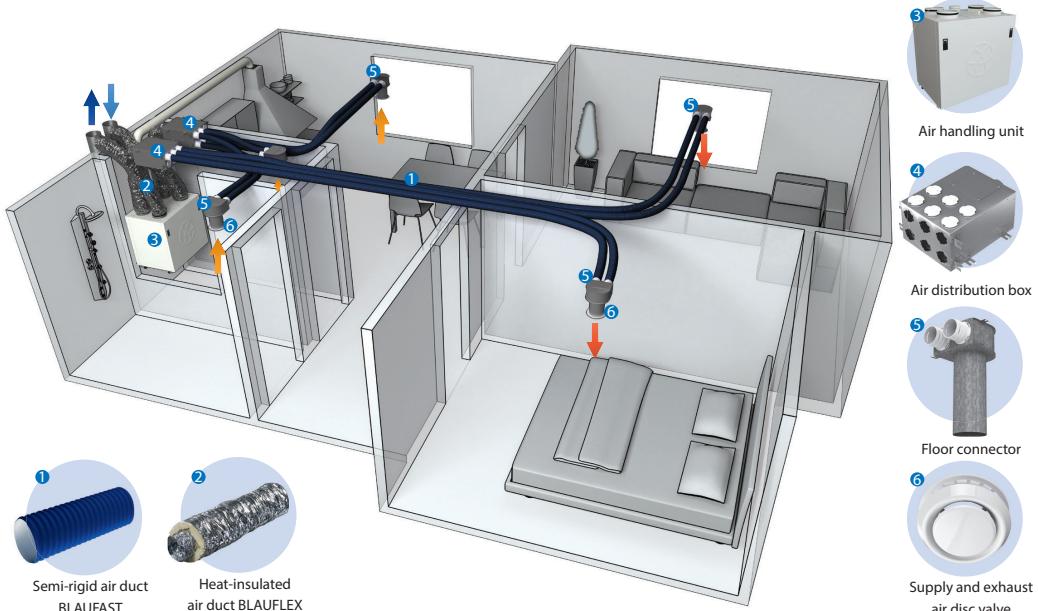

k_{he} – heat recovery efficiency (according to the diagram), %.
