

# BREATH LIFE

PREVENT POLLUTED INDOOR AIR  
FROM THREATENING YOUR HEALTH

## Indoor air can be harmful

Around 80% of the time we breathe indoor air that is very often polluted with all kinds of unpleasant and harmful dusts, gases, (fine) particles, viruses and bacteria. In addition, problems can be encountered with "sick building syndrome", tobacco smoke and intrusive odours.

People with asthma, COPD, cardiovascular diseases, diabetes, older people and children are at greater risk, but even healthy people can experience health problems on exposure to polluted air.

## The most harmful pollutants are invisible

Polluted indoor air is often not even noticed. Most of the substances are odourless and cannot be seen with the naked eye, but they are harmful to health. The diagram opposite shows how many harmful particles there may be in our indoor air. If you do nothing here this polluted air can seriously harm your health and the health of your employees, clients and guests.

Particles of < 0.01 micron penetrate as far as the alveoli and can thus get into the blood stream.

we spend  
**80%**  
of our time indoors

# PROTECT YOUR HEALTH AND ENSURE REALLY CLEAN INDOOR AIR

With VisionAir Blue Line,  
a new generation of air cleaners

• Viruses

• Bacteria

• Dental

• (Fine) Dust

• Odour

• Gas / Sick  
Building  
Syndrome

• Smoke

## A fresh environment works better

Really clean indoor air contributes to better health and pleasant working conditions. This has a positive effect on productivity, on absence due to illness and on the image of your organisation. In a fresh environment with clean indoor air, people have less problems with headache, concentration problems, fatigue and sinus irritation.

No matter whether in an office, copy room, day nursery, café, coffee shop, nursing home, hospital, plaster room, dental practice or hairdressers. Good and healthy indoor air is important for everyone working or spending time there.

## Tackle the problems effectively

Stop exposing yourself, your employees and your guests to the invisible and polluting dust particles, bacteria, viruses, allergens and odours floating around in the air. Assume responsibility and ensure a good and healthy air quality.

The VisionAir Blue Line allows you to effectively tackle any problem with your indoor air. Depending on the room and the specific pollutants, the VisionAir Blue Line offers a perfect made-to-measure plug & play solution.

care for clean air

# VISIONAIR

VisionAir Blue Line 1

## Choose a unique filter combination

The VisionAir Blue Line offers you eight versions to choose from. These unique filter combinations are geared to the different types of air pollution. You can now selectively address the pollution that causes the most problems:

- **DustFree** in the versions Universal and Special to get rid of (in)visible (fine)dust.
- **MicrobeFree** filters viruses and bacteria out of the air.
- **GasFree** combats harmful gases and the 'sick building syndrome'.
- **SmokeFree** in the versions Special\* and Global cleans the air in smoking rooms.
- **OdourFree** in the versions Universal and Incontinence prevents unpleasant and intrusive odours from hanging in the air.

All the filters of the VisionAir Blue Line comply with the ISO 16890 standard.

## An appropriate solution for every room

The stylish design of the VisionAir Blue Line fits into every interior. Furthermore, the advanced air cleaner is quiet and very user-friendly in operation. The cleaner has a large range and is energy-efficient. It is **the** new generation of air cleaners for optimum comfort and ease of operation.

The VisionAir Blue Line is suitable for installation on the ceiling and on the wall. You can also choose a mobile standard version.

\* Ideal for countries where service contracts for maintenance cannot be concluded.

# BLUE LINE

VisionAir Blue Line 1 on display

#### Oled display

The air cleaner can be programmed via this information display. It can naturally also be operated using the supplied remote control.

#### Timer

Possibility of programming the fan speed and operating times. From economical and quiet during the day to thorough cleaning at night, or vice versa.

#### FreeBreeze

FreeBreeze are optional scent cartridges that you can easily place in the VisionAir. They give the air an extra fresh scent.

#### PIR Sensor

Motion detector. Thanks to the infra-red detector, the air cleaner starts automatically when movement is detected in the room.

#### Dust sensor or gas sensor

Optional addition of a dust sensor that measures the concentration of dust particles and switches the air cleaner on and off automatically.

#### UV-C light Blue Line (MicrobeFree)

This application - especially for dental practices, hospitals, daycare centres and the food industry - allows you to sterilise the air. The special UV-C lamp kills harmful bacteria, viruses and fungi.
